

## **The INCM signs an agreement with the Pedro de Santarém Group of Schools**

A partnership agreement has been signed between the INCM and the Pedro de Santarém Group of Schools as part of the *Learn and Innovate with Information and Communication Technologies (ICT)* initiative, promoted by the Ministry of Education with the aim of encouraging the educational use of ICT to improve learning among students.

The Pedro de Santarém Group of Schools put itself forward for the *Learn and Innovate with ICT* initiative by proposing the creation of a wiki with content on the History and Geography of Portugal, and it was one of 100 Portuguese educational establishments whose projects were selected.

The educational and technological aspects of the project arose the interests of the INCM, which holds a vast repository of documents related to its activity and the History of Portugal, as well as a large collection of coins and medals that could constitute a pretext for revisiting important periods and events in the history of the country.

Through this cooperation protocol, the INCM will make available digitalised documents and photographs from its collection of documents, coins and medals to provide for the creation of digital education resources. It will also provide support for educational visits to the company's facilities by students and teachers involved in the project, as part of its mission to support the community, education and culture.
